IMAN NAZRI

Portfolio Deck

ABOUT ME

A designer working in the Web3 space for over 2 years. Passionate in making Web3 usable for retail & power users.

IMN © 2023

WORK EXPERIENCE

2022 - Present

Etherscan

Sole Product Designer at Etherscan, the world's leading block explorer for Ethereum. I was responsible in designing new features that applies & scales to every other Etherscan-runned explorers (i.e. BSCScan, BaseScan, PolygonScan etc).

PROOF OF WORK - HIGHLIGHTS (ETHERSCAN)

Blockscan Chat App

Homepage Custom Cards

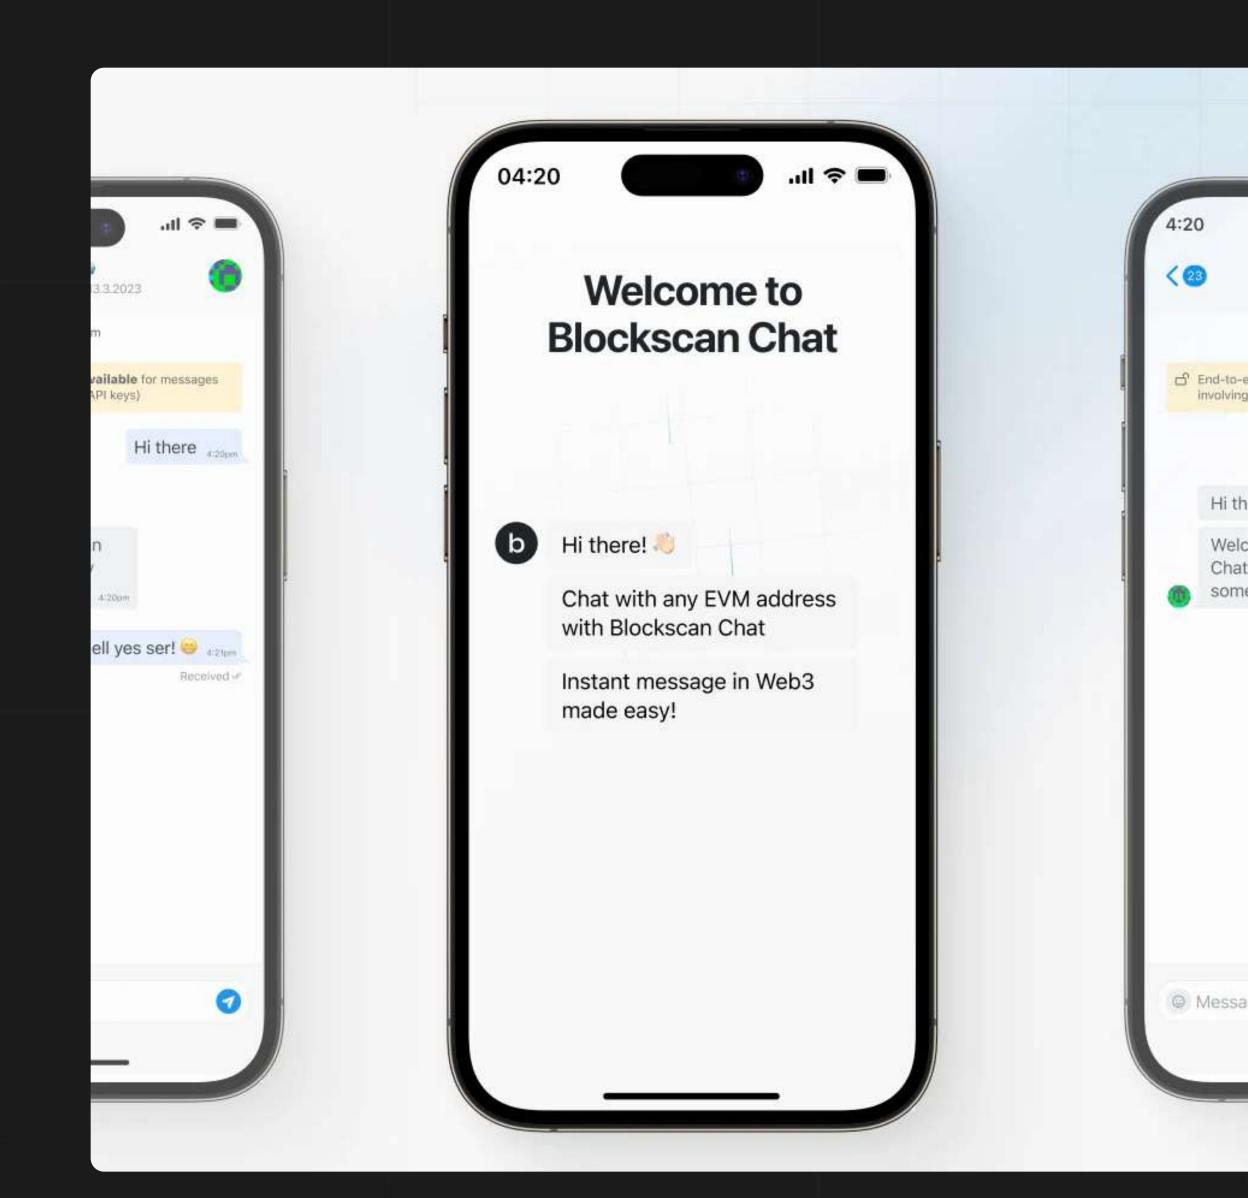

Advanced Filter

Gas Tracker Redesign

PROOF OF WORK (ETHERSCAN) (2023)

Blockscan Chat App

Designed a messaging app that enables messaging across EVM addresses. Led & owned the design decisions from $0 \rightarrow 1$

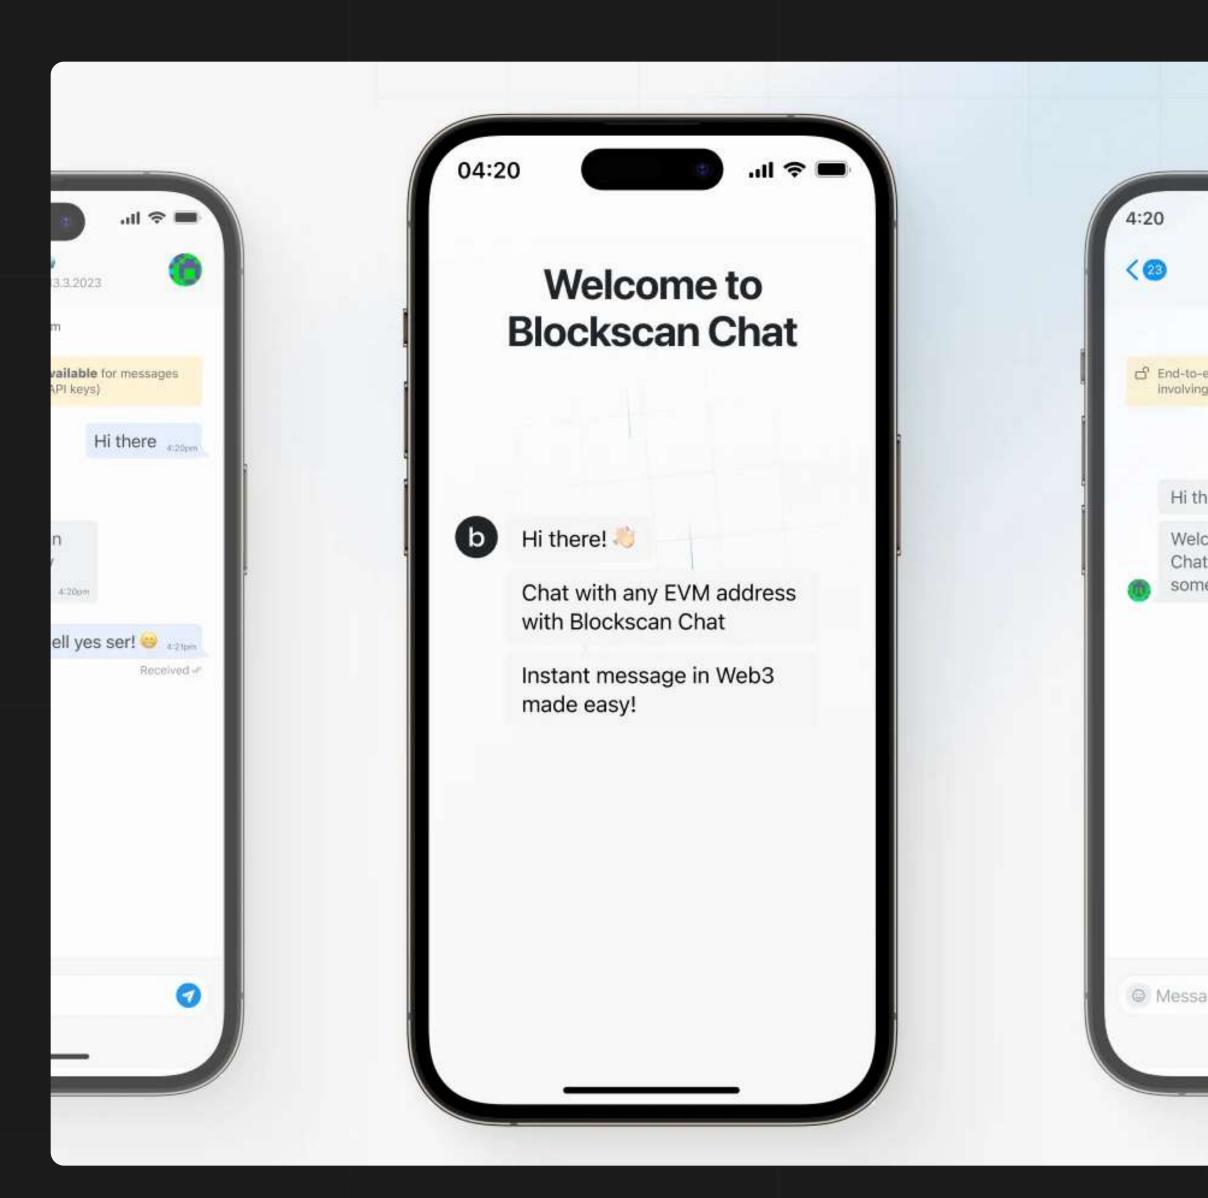

chat.blockscan.com/start

- Communicate & align design strategy to PM and Mobile Dev.
- Design MVP features that fit within the technical constraints.
- Create familiar instant-message experience for both new Web3 users and established Web3 users.

Takeaways

- Work closely with Mobile Dev to ensure core features are met without compromising the launch timeline.
- Design considerations should be agnostic to cater for both iOS and Android platforms
- Internal testing allowed for rapid iterations before launch.

PROOF OF WORK (ETHERSCAN) (202

Homepage Custom Cards

Enables user to customize their Etherscan home page to display onchain data that they desire.

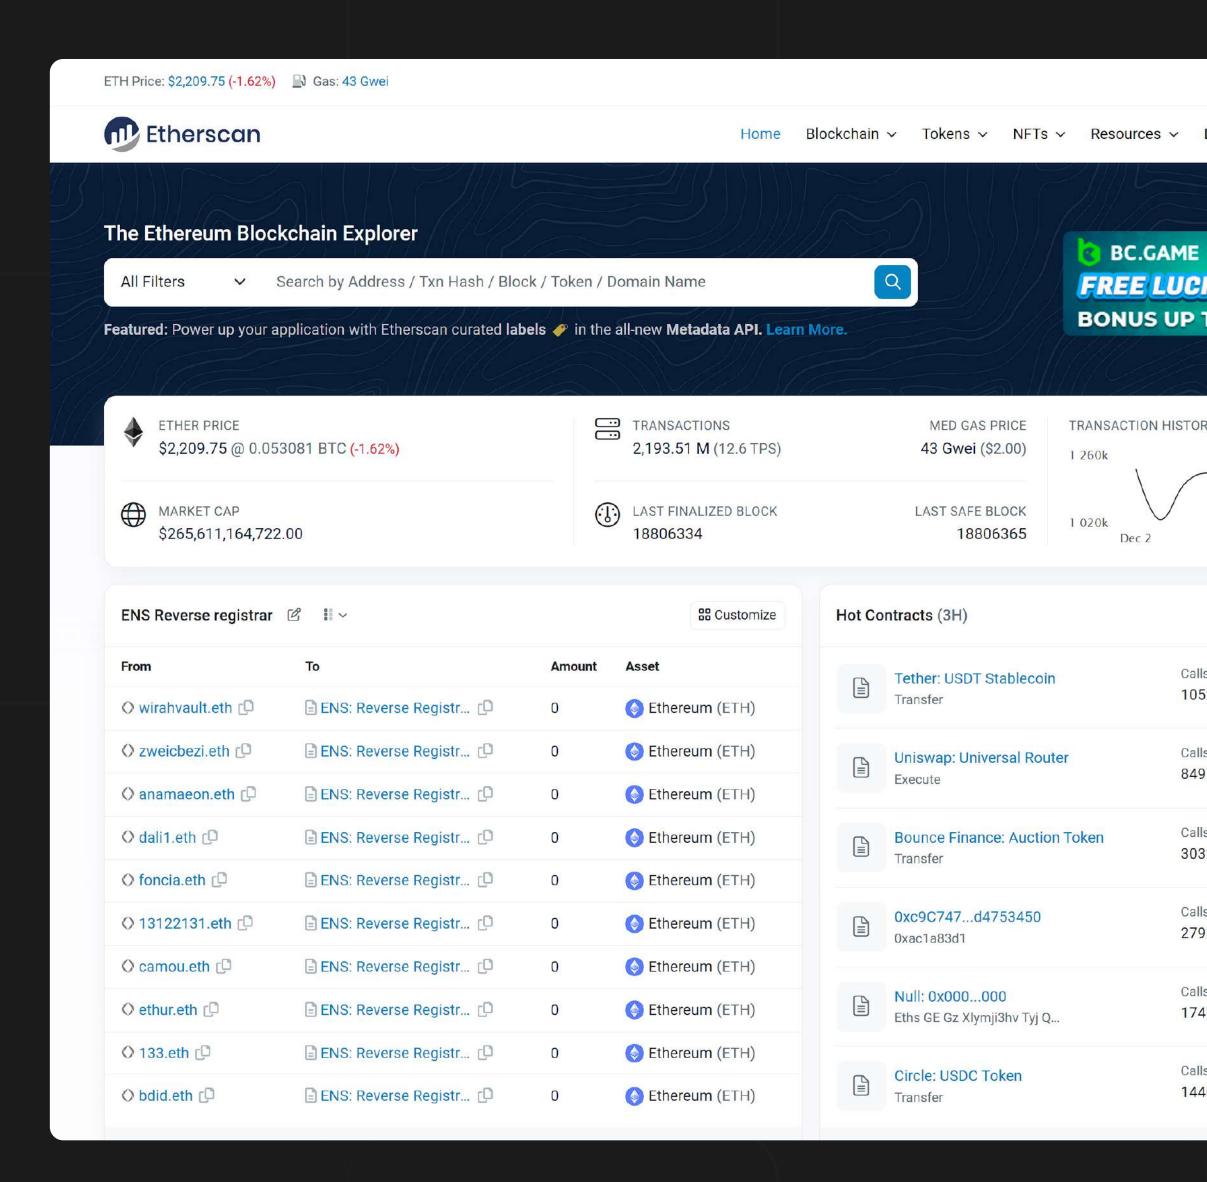

To use this feature, you must be logged-in at Etherscan.io

- Ensuring that this feature to be non-invasive while being intuitive for existing + new users.
- Design new components without changing existing homepage layout & maintain design principles

Takeaways

- Active communication with Design Lead and PM on the design strategy led to a smooth ideation + design process.
- Attention to detail and deep user consideration were required in designing a feature for a page that have millions of visitors.

To use this feature, you must be logged-in at Etherscan.io. Feel free to try it out :)

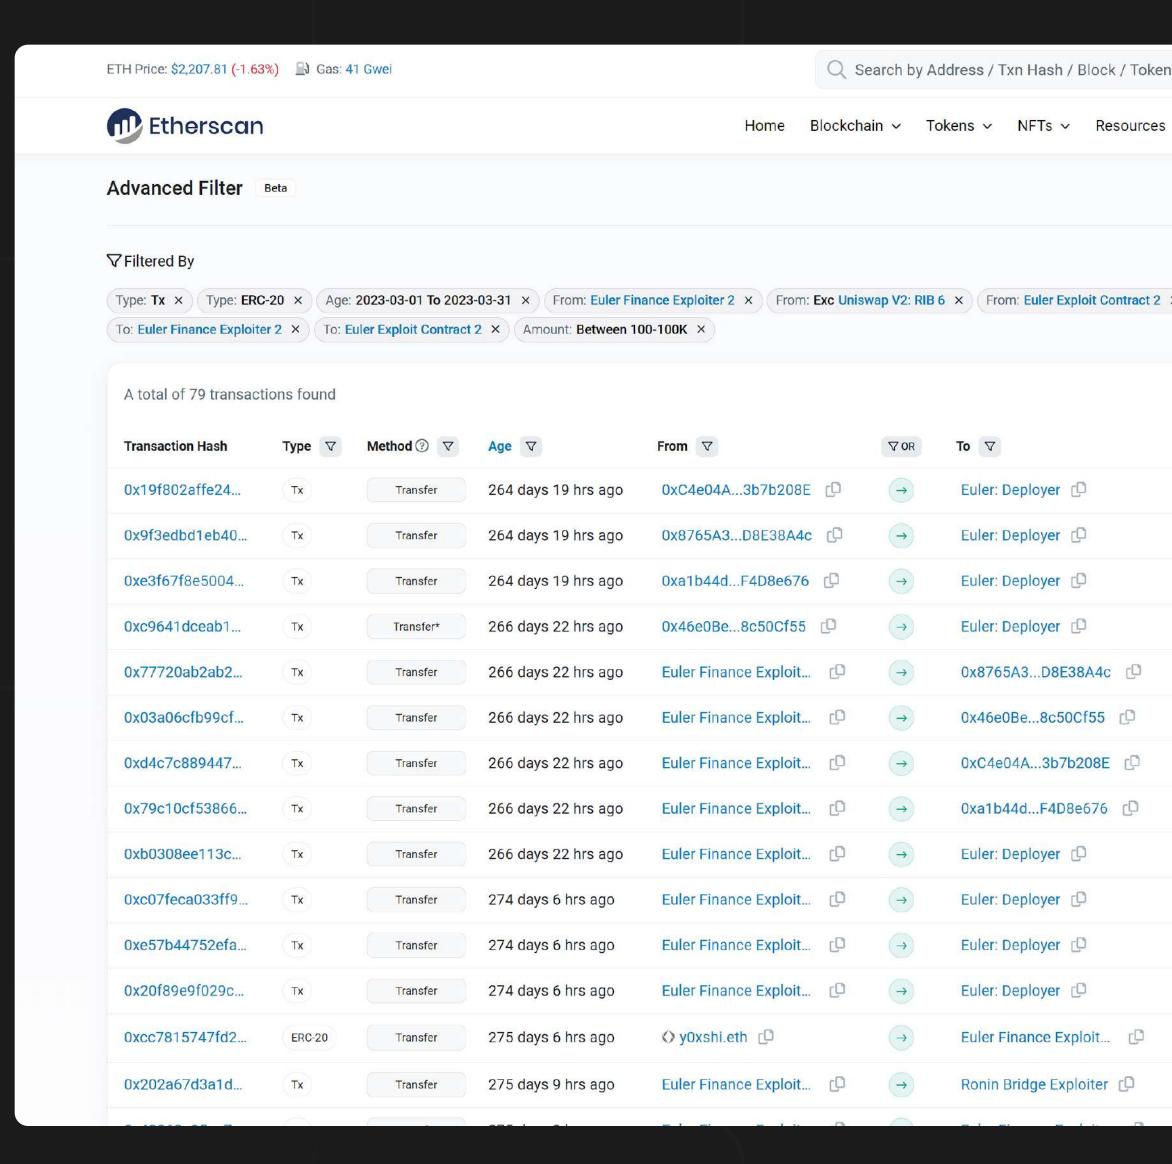

PROOF OF WORK (ETHERSCAN) (2023)

Advanced Filter

Users can extract insights and perform specific analysis within the Ethereum data on Etherscan.

Also designed a leaderboard system that enables users to share their filters for the public good.

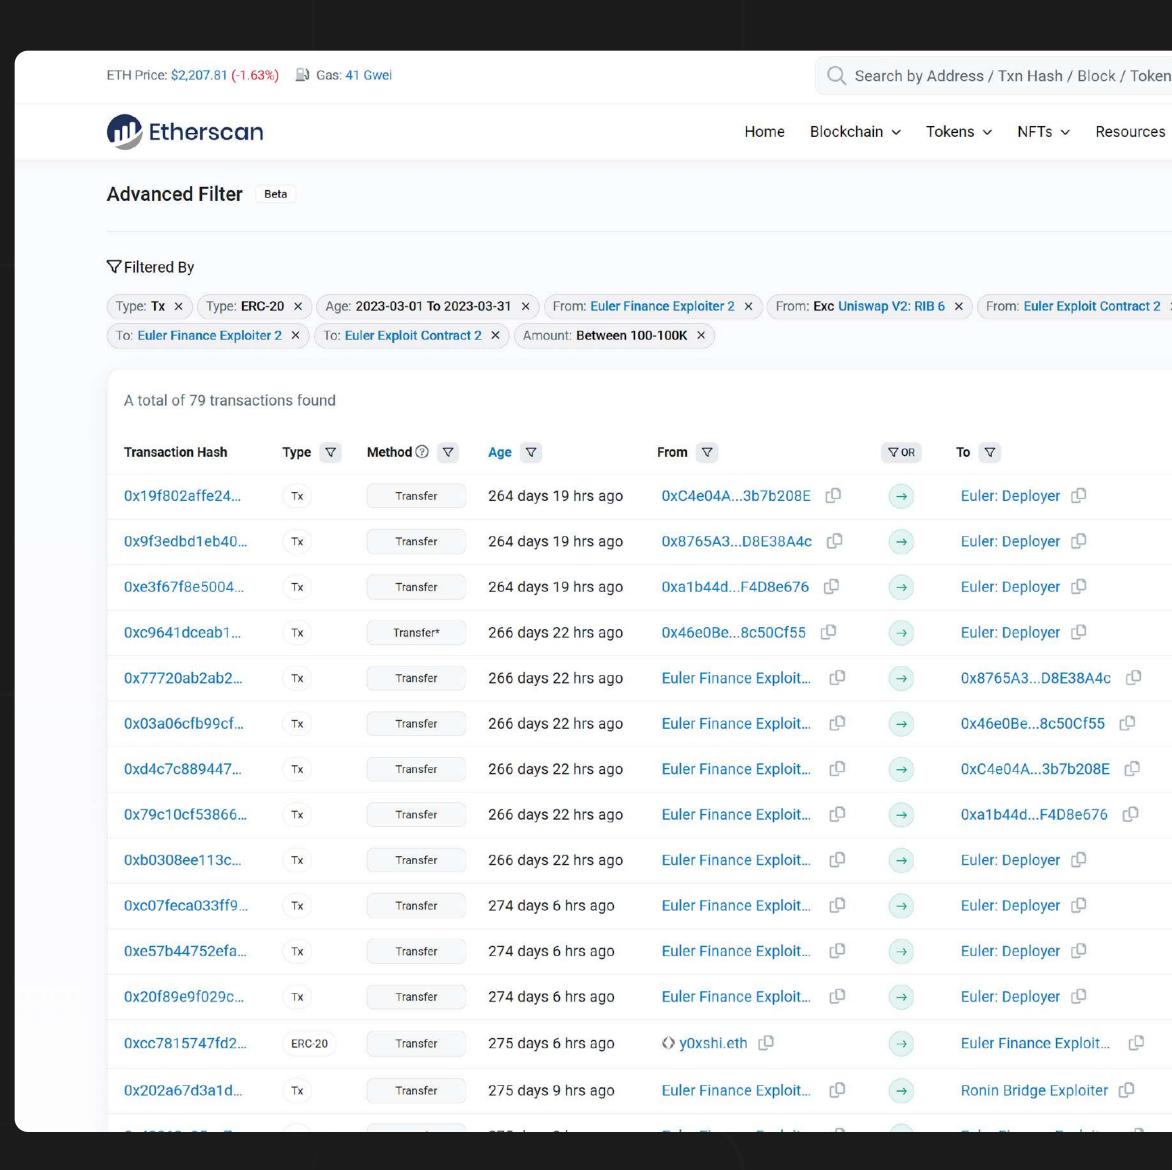

etherscan.io/advanced-filter

- Make design + eng implementations (with dev's input) that would result on a performant feature
- Integrate a robust feature on high-density layout
- Maintain design consistency for new components

Takeaways

- Monitor user feedback and make iterative improvements
- Address limitations that were present at launch and work closely with PM + Eng to identify areas that would need design inputs + rethink

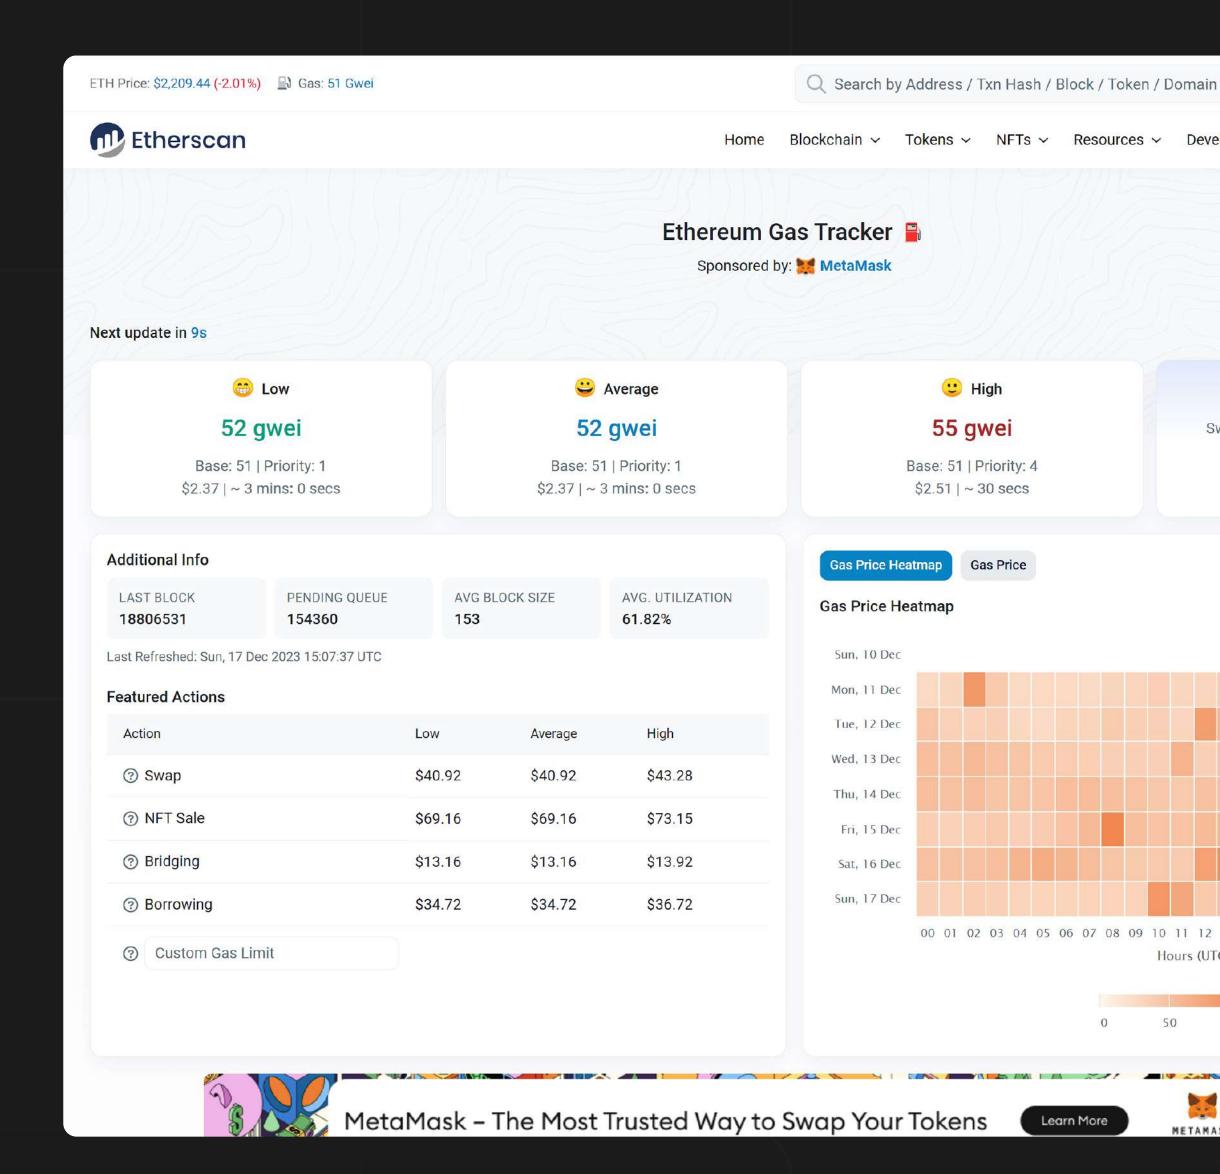

etherscan.io/advanced-filter

PROOF OF WORK (ETHERSCAN) (2023)

Gas Tracker Redesign

Revamped the Gas Tracker page to show a gas price heatmap as well as aligning design objectives outlined by the sales team

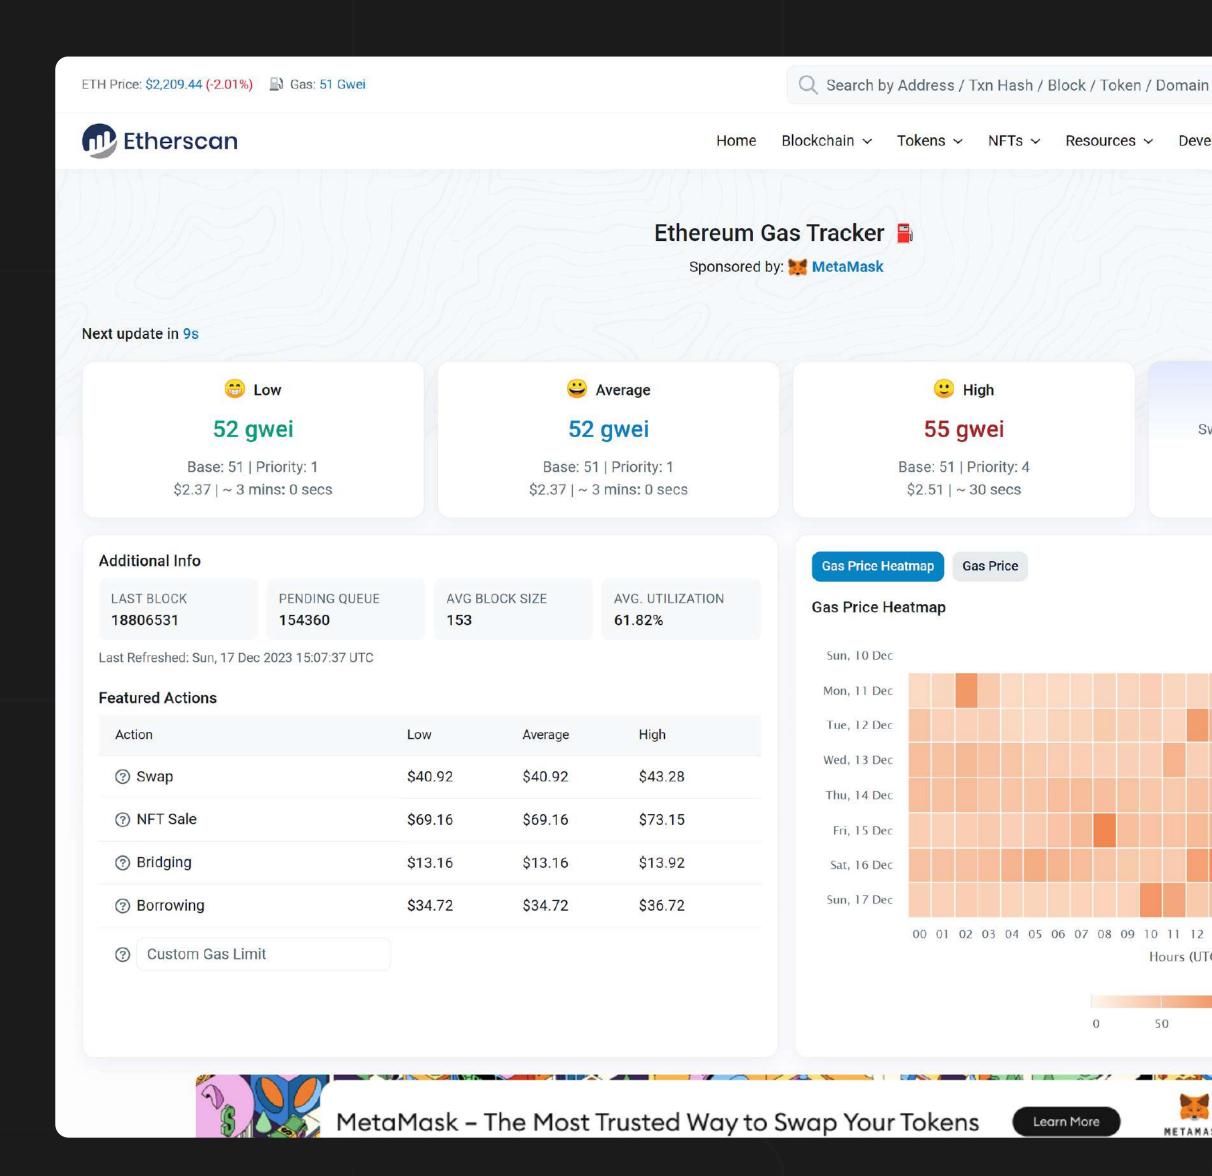

etherscan.io/gastracker

- Communicate & align design strategy to several team (PM + Sales + Eng)
- Ideate on what high-level information to display that would provide the most value for users, at a glance
- Explore key areas to add Ads Slot(s)

Takeaways

- Maintain active feedback loop when collaborating with multiple departments
- Learned how users utilize Gas Tracker page for on-chain activities and their behaviour

etherscan.io/gastracker

NOTE

Detailed walkthrough of my work will be reserved for interview sessions. Thank you!
